

## **ESM 438 Lab 3 Assignments**

*To be completed before the start of the lab*

### **Task Two: Methods and Results**

Prepare the middle third of your 12-15 minute talk. This should pick up wherever your introduction left off, continuing into the “meat and potatoes” (as my advisor called it) of your talk - how you solved the problem, what data you collected, and what you have found so far. Try to include the bulk of your data here, but leave big interpretation slides for your discussion/conclusions next week. Try to update slide design as needed and practice presenting data with best practices discussed in class.
